User-driven Dashboard Reports & On-demand Analysis INSIDE IBM Notes

IntelliPRINT Dashboard Reporting is an integrated dashboard reporting & data analysis solution that has been designed specifically for IBM Notes end users. It is a native component within the collaborative Notes that enables end-users to create, analyze and extend dashboard reports and widgets like charts, tables and pivot tables!

The optional IntelliPRINT Dashboard Report Analyzer add-on provides contextual analysis from the dashboard widget allowing users to perform extended data analysis operations. End users can extend the Dashboard report data and remodel it in a dynamic and user friendly way, to better present their current business situation. IntelliPRINT Dashboard Reporting can retrieve data from the Notes database in real-time and can be setup to auto-refresh data at pre-defined intervals.

IntelliPRINT Dashboard Reporting is ideally suited for organizations that want to enable end users to create their own reports in a variety of pre-defined dashboard layouts to better understand and monitor business situations, and analyze data whenever needed.

Key Benefits

- Native dashboard reporting and data analysis component for Notes applications
- Enables end users to modify the reports, and even create few of their own and visualize, understand and monitor business situations by getting a real-time view of key business parameters
- Provides users with the ability to filter data displayed in the report in real-time to refine or isolate the data set as required by the business situation
- Widget & Dashboard Layouts enable Business users to create personalized views of complex business information
- Enables users to further analyze the dashboard data using other dimensions of the data
- Business users achieve a high level of competency with minimal training and virtually no IT overhead
- Unlocks the business value of Notes data

Key Features

- Wizard based Widget & Dashboard creation
- Widgets can be reused across multiple dashboards
- Dashboard Filters that enable end users to filter a Dashboard in real-time
- Multi-series Charts gives users the ability to display more than one series of data (in the Y-axis) in the same chart as long as the X-axis fields for all the series are the same.
- Custom Grouping options to group rows of data containing common values to create user friendly groups.
- Enhanced chart options like 'Rotate', 'Place Inside' for displaying marks on chart objects
- Flexibility to display X-axis values in ascending / descending order
- Expand or collapse rows and columns at each sub level to view detailed or summarized information
- Simple Widgets enable end users to create real-time snapshot reports within minutes
- Dashboards combine snapshots of data from multiple Notes applications or databases
- Widget & Dashboard layouts enable users to view different representation of the same data without accessing the database
- Widget Toolbars provide quick and convenient access to commonly-performed operations on widgets

System Requirements

IntelliPRINT Dashboard Reporting for Notes

Software

Operating System	Windows XP, 7, 8, 8.1, 10
